

## N GREELEY MULTI-USE PATH

*N Going St to N Interstate Ave*

The Portland Bureau of Transportation is proposing to build the **N GREELEY MULTI-USE PATH**, a two-way, one-mile path on the east side of N Greeley Avenue from N Going Street to N Interstate Avenue. The two-way bicycle and pedestrian facility will be protected from vehicle traffic with continuous concrete barriers.

N Greeley Avenue is a busy, high-speed road with heavy freight vehicle traffic. This project will protect cyclists and pedestrians behind a continuous concrete barrier connecting North Portland neighborhoods and businesses with the Rose Quarter. In addition, the project will widen the outside lanes to better accommodate truck traffic and increase the buffer between opposing traffic lanes.

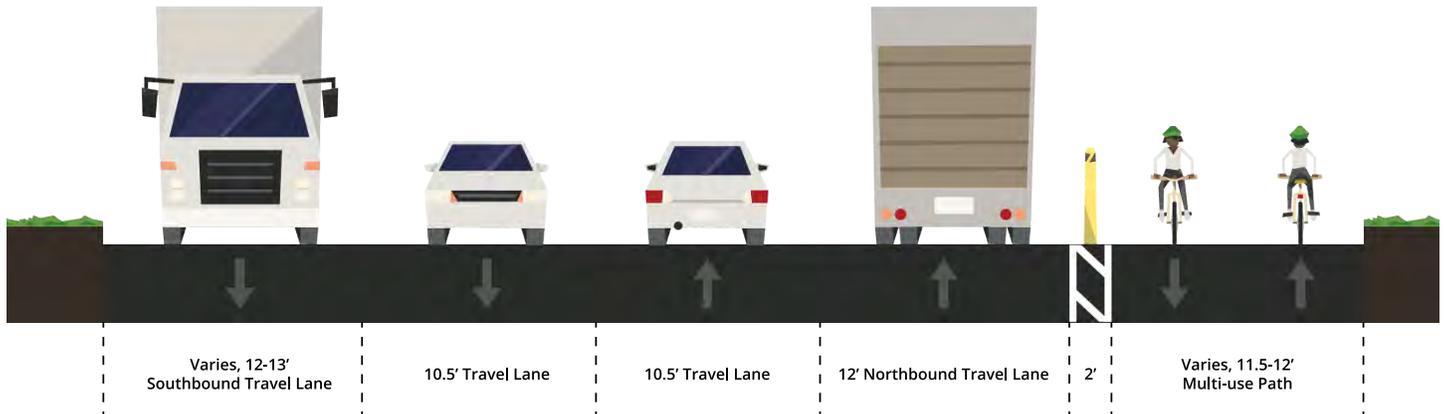

◀ *N Going St: Cyclists will move diagonally across the intersection with a new bike signal.*

▶ *At the south end of the project, the continuous concrete barrier will tie in to the existing barrier.*

▼ *Proposed cross section includes a 11.5-12' multi-use path, a 12' northbound travel lane, two 10.5' travel lanes, and a 12-13' southbound travel lane.*

### PROJECT SCHEDULE

Design will take place during 2017 and early 2018; construction is scheduled for late Summer/Fall 2018 or Spring 2019.

### PROJECT FUNDING

The project has two funding sources: a City Council-approved Major Maintenance Set-Aside and Heavy Vehicle Use Taxes.

### PROJECT MANAGER
